

TMAS

Segmented mandrels

TMAS is a mandrel with interchangeable segmented collet, designed for internal short parts requiring heavy machining efforts.

APPLICATION

- Turning, hobbing

TECHNICAL FEATURES

- Attachment: Spindle nose
- Actuation: Automatic
- Internal clamping: Smooth
- Air sensing control on the workstop: With or without
- Chips blowing or coolant in the center: With or without

ADVANTAGES

- Accuracy, repeatability, robustness, durability, reliability
- Technology with an enveloping clamping which allows to transmit a large tightening torque on the workpiece.
